

WILCOX OIL COMPANY SUPERFUND SITE REMEDIAL INVESTIGATION PHASE 1 GEOPHYSICS: The EPA ERT began Phase1 geophysics investigations on September 14, 2015. A combination of seismic, electromagnetic surveys, and ground penetrating radar will be used to investigate and map waste material and bedrock. The use of this tool will improve the conceptual site model, scope cone penetrometer light induced florescence studies, and focus future field sampling. **John Meyer, 214-665-6742.**
